The LOCK BLOCK® Padlock Protector has been designed to make it acceptable to a variety of uses, which includes padbolt hasps, toolboxes, motorbikes, sheds, gates etc. On motorbikes this device is used to secure the front and rear wheels. It is a portable device, which therefore gives the LOCK BLOCK® Padlock Protector a huge advantage

The LOCK BLOCK® Padlock Protector has been made from 100% 304 stainless steel casting to give durability and to last a lifetime. It will fit padlocks from 40mm-50mm. The inventor tells us there are no similar padlock locks available on the world market and that previous attempts to provide protection for padlocks have suffered from design flaws and failure.

The LOCK BLOCK® Padlock Protector has been designed to provide a greater degree of versatility. It is also very portable and more suitable for a greater variety of applications.

The visual appearance itself works as a deterrent to the opportunist thief or vandal.

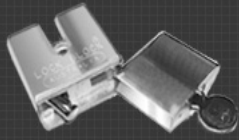

The security industry has had a rapid expansion in the last two decades with more emphasis being placed on electronic surveillance and security cameras . However at the lower end of the scale the securing of external doors and gates still remains essentially the domain of the padlock.

Other Information

The LOCK BLOCK® Padlock Protector should be of interest to hardware stores, padlock manufacturers, locksmiths, security companies. Our client is looking for regional distributors in different market sectors but would also consider a licensing arrangement.

The LOCK BLOCK® Padlock Protector was launched in early 2005 and the reception in Australia has been very favourable – one retailer pointed to \$90 padlocks and suggested the LOCK BLOCK® could be sold with a cheap padlock to give the same (or better) degree of security than the \$90 padlock.
